7R	Code No: 113AN JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD B. Tech II Year I Semester Examinations, April/May - 2018 PROBABILITY AND STATISTICS (Common to ME, CSE, IT, MCT, AME, MIE) Time: 3 Hours Max. Marks: 75
	Note: This question paper contains two parts A and B. Part A is compulsory which carries 25 marks. Answer all questions in Part A. Part B consists of 5 Units. Answer any one full question from each unit. Each question carries 10 marks and may have a, b, c as sub questions. PART- A
7R	1.a) Define discrete and continuous random variables. [2] b) If a random variable X follows a Poisson distribution such that $P(X=1) = P(X=2)$, find the mean. [3] c) The joint probability functions of X and Y is $f_{XY}(x,y) = \begin{cases} 9e^{-3x-3y}, & x \ge 0, y \ge 0 \\ 0, & otherwise \end{cases}$
	Check whether the probability function is a valid density function. [2] d) Show that the correlation coefficient is the geometric mean of the two regression coefficients. [3] e) The sample of size 4 has values 25, 28, 26, 25. Find the variance of the sample.
7R	f) Write any two properties of F-distribution. g) Define transient state in a queuing system. h) Arrival rate is 10 per day and service rate is 16 per day. The day consists of 8 working hours. Find the average number of customers in the system. Assuming that arrivals are Poisson and service time distribution is exponential. i) Define continuous random process. j) What do you mean by stochastic matrix? Give an example. [2] [3] [3] [2] [3] [2] [3] [2] [3] [2] [3] [2] [3] [5]

7 R	2. A continuous random variable X has the p.d.f. $f(x) = \begin{cases} kxe^{-x}, & 0 < x < 1 \\ 0, & otherwise \end{cases}$ Find (a) k (b) $E(X)$ (c) $E(2X-3)$ (d) $V(X)$ and (e) $V(4X+3)$. [10] 3.a) The first three moments of a distribution about the value 3 are 2, 10, 30. Find the moments about $x = 0$. b) Find the moment generating function of Normal distribution and hence find its mean. [5+5]
